

## **Bubble Burst? Nope! Just Slow Down!**

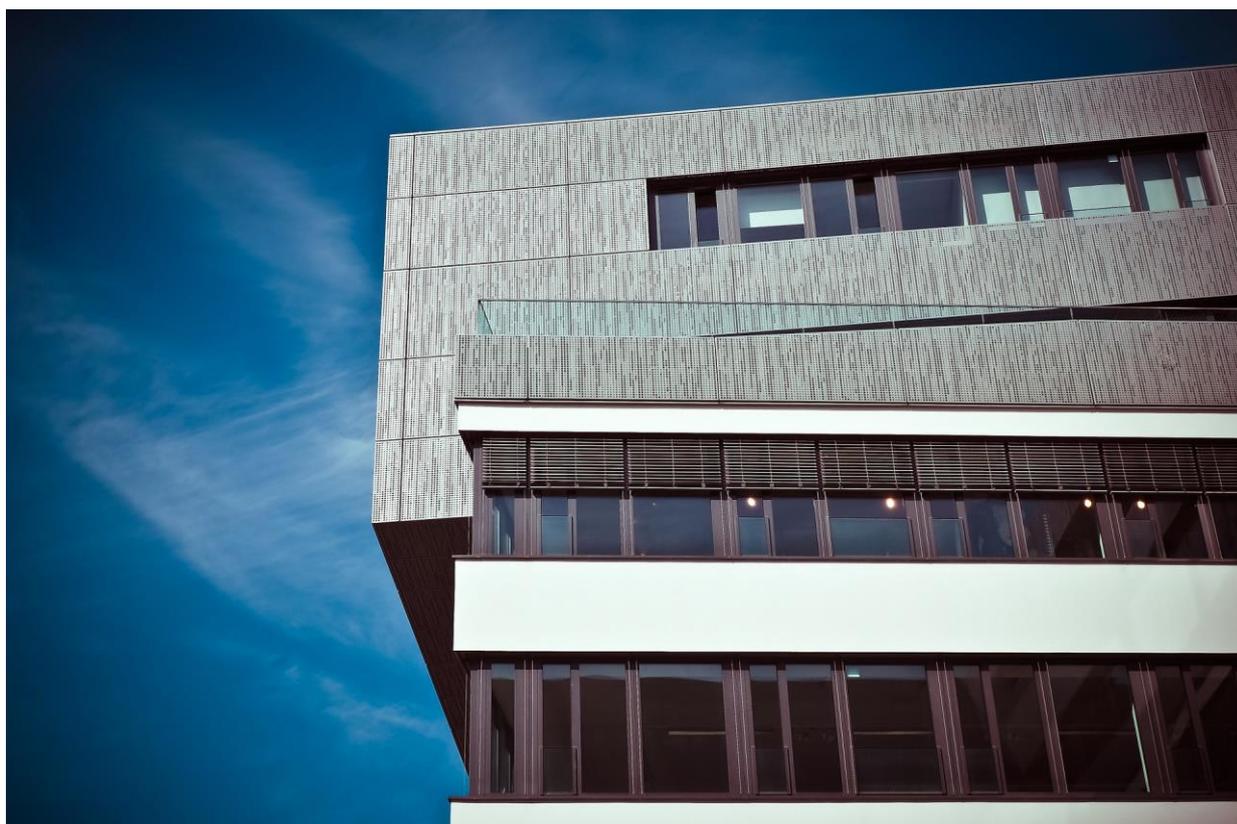

*Home sales to slow down; sector valuation to de-rate*

*as the strictest tightening keeps going*

2016 was a harvest year for real estate developers, Home-purchase-restriction (HPR) was loosened in 2<sup>nd</sup> and 3<sup>rd</sup> tier cities, mortgage rate was lowered, and developers recorded strong sales growth with rapid home price surge. However, as inventory dropped to a healthy level, tightening cycle ticked in again.

Sales performance in larger cities and that in lower tier cities diverged in 5M17: GFA sold in top 36 cities declined by 25% yoy vs. national GFA sold grew by 14% yoy. Giants are expanding their market shares, mid-sized developers' market share has been compressed further. The era of oligopoly has come.

Property sector share price on average has gained 50% YTD; sector average PE is approaching their highs in 2015 and 2012. We expect the property sector valuation to de-rate in 2H17. We selectively overweight developers with achievable presales growth, less share price gain YTD, and relatively low valuation. We are cautious on developers with big share price gains.

## Executive summary

### Be cautious on giants, look for safety margin

We expect the property sector valuation to de-rate in 2H17. We selectively overweight developers with achievable presales growth, less share price gain YTD, and relatively low valuation. We are cautious on developers with big share price gains YTD, as main consolidators such as Evergrande and Country Garden performed very well YTD, up by 187% and 106%. Thanks to the rapid growth of contracted sales in 3<sup>rd</sup> tier cities. Sunac also gained 137% YTD. We believe positive factors of 3<sup>rd</sup> tier cities have been priced in share price of Evergrande/ Country Garden/ COGO.

The 12mth forward P/E of property sector is about 8.3x, approaching their highs in 2015 and in 2012. We look back to 6 year ago, the hardest time in 2011, the market cap weighted P/E of property sector was only 4x. Giants and 3<sup>rd</sup> tier cities players with over 50% gain YTD should be avoided. On the other hand, names with low P/E & P/B, 15% ROE and high dividend yield should have higher safety margin and attractive.

### Omni-directional tightening in 2017

New HPR introduced in 2017 reduced valid demand in 1<sup>st</sup> tier cities. A couple used to be allowed to own 4 units, but now is only allowed to own 2 units. The HPR requires 5 year social security record for home buying. Buyers with unpaid mortgages are required to put down 50%/70% down payment for their first home/second homes. 1<sup>st</sup> and 2<sup>nd</sup> tier cities introduced 2-3 year lockup period for home resold. Presale price cap is stricter than before, making developers to delay project launches. Land supply have been enlarged to stabilize land price in short term.

### Sales growth momentum halted

As the HPR loosened in 2016, GFA sold grew strongly by 22.5% yoy in 2016. However, as HPR tightened again, the growth in GFA sold in 5M17 slowed down to 14.3% yoy, comparing to a 33.2% yoy growth for 5M16. Sales performance in larger cities and that in lower tier cities diverged in 5M17: GFA sold in top 36 cities declined by 25% yoy vs. national GFA sold grew by 14% yoy. Most developer are patient to wait till Golden Sept. & Silver Oct (金九银十) in order to launch projects at a desirable price. We believe the strict tightening intends to cool down the market and lower home price, not clamp down the market.

### Inventory lowered and investment of real estate come to steady and healthy growth

Due to the strong sales in 2016/17, national inventory months have declined to a very healthy level of only 21.3 months in May 2017, the lowest level since 2011. This gives room and time for the tightening policies. Saleable GFA peaked in Feb. 2016. Then it declined steadily and recorded yoy decline in Nov. 2016. It is the first time recorded yoy decline of saleable GFA since 2004. In May 2017, saleable GFA declined by 8.5% yoy, while saleable residential GFA further declined by 17.8% yoy. Meanwhile, the growth of newly commence GFA are lower than that of GFA sold in 2015/2016/first 5 months of 2017. It indicates 1) developers are more cautious on commencement, in order to avoid liquidity crisis; and 2) uncertainty of policy trend in the near term.

### Great improvement after a loosening year

18 of 29 developers have lowered their net gearing ratio in FY16. Booking GPM in FY16 have significantly improved as well. In FY15, only 4 of 29 companies recorded yoy increase of GPM. In FY16, only 7 of 29 companies recorded decline of GPM.

**The era of oligopoly has come**

Listed developers' performances are unexpectedly good. 5 companies have achieved over 50% of their target. Longfor even achieved 69% of its target. Developers mainly in 3<sup>rd</sup> tier cities, Evergrande, Country Garden and COGO, achieved 75.9%/ 30.9%/ 126.5% yoy growth. The era of oligopoly has come. Top 20 companies accounted for 25.2% of total home sales in China. Top 100 companies accounted for 44.8% of total sales. 21-100 ranking companies only accounted for 19.6% of total sales. In first 5 months of 2017, top 20 accounted for 59.6% of total sales, top 100 accounted for 37.1% of total sales, 21-100 ranking companies only accounted for 22.5%.

## Omni-directional tightening in 2017

New round tightening has come for cooling down home price. Stricter HPR, pre-sales price restriction, high down payment rate and suspension of bond issuance are all applied.

### Less quota for Singles, 2-3 year of lockup period for home resold

HPR policies become more specific in 1H2017. The singles and the families have different quota to buy house. In 1<sup>st</sup> tier cities, a family is allowed to buy two units of houses. The singles are allowed to buy only one house. New HPR reduces valid demand in 1<sup>st</sup> tier cities. A couple was allowed to buy 4 units, but now is only 2 units. Longer social insurance record is another barrier for non-local home buyers. The previous version of HPR require 2-3 year record of HPR policies. The updated version required 5 year record. After 1<sup>st</sup> tier cities introducing stricter version of HPR, 2<sup>nd</sup> tier cities follow suit.

Mortgage record is also a key factor under current HPR. Home buyers with unpaid mortgage record are required 50%/70% down payment for first home/second home. On the other hand, in order to reduce short term investment purchase, 1<sup>st</sup> and 2<sup>nd</sup> tier cities introduce 2-3 year lockup period for home resold in different cities.

**Figure 1: New HPR introduced in 2016**

| Cities       | Local residents      |                      | Non-local residents |                                 | Down payment requirement        |                                  |                                   |                                    |
|--------------|----------------------|----------------------|---------------------|---------------------------------|---------------------------------|----------------------------------|-----------------------------------|------------------------------------|
|              | Family quota (units) | Single quota (units) | Quota (units)       | Social Insurance Record (Years) | First Home (No mortgage record) | Second Home (No mortgage record) | First Home (With mortgage record) | Second Home (With mortgage record) |
| Beijing      | 2                    | 1                    | 1                   | 5                               | 35%                             | 80%                              | 80%                               | 80%                                |

Source: CRIC; AMTD Equity Research

Government still executes the old ways to cool down the physical market: 1) control the pace of home demand releasing; 2) control pre-sales price of new residential projects.

However, **DOES IT WORK?** As Figure 2 shows, the efficiency of HPR lasted 6-9 months. After that, mom growth of home price rebounded again and turned to be positive growth in next 6-9 months. The last HPR tightening started at October 2016. Home price index fell from 1 in October 2016 to only 0.3 in January 2017, rebounded to 0.7 in April 2017. According to HPR history in last 6 years, if the home price rebounded in short term, more

HPR will be introduced in next 6-9 months. We estimate HPR will **not be the only** policy introduced this time.

**Figure 2: Efficiency of Home Purchase Restriction**

Source: NBS; AMTD Equity Research

**More than HPR: strict approval of pre-sales price, bond issuance suspension and enlarge land supplies**

In 1Q2017, 1<sup>st</sup> & 2<sup>nd</sup> tier cities have tightened the approval for pre-sales price, mainly the tightening measures are 1) pre-sales price of new phase must be lower than previous phase; or 2) pre-sales price of new residence must be lower than or same as home price of nearby residences (some cities restrict some price limit at certain district). Regarding the rule one, it is acceptable because land cost is almost the same in different phases of same project. It just limits the gross margin upside. However, the rule two may be nightmare for developers, as land price keep jumping in last few years, home price is capped as same price of old residences, which are built with much lower land cost years ago. Some land cost of new residence is almost as same as home price of nearby residence. Developers have to launch residences after home price of nearby project surges rapidly, otherwise profitability of new project will be very low.

Another tightening measure is suspension of onshore bond issuance. Most applications of bond issuance by developers are suspended from 4Q2017. There is no signal that the suspension will be removed in the short term. As of 19 June 2017, only RMB151.7 bn of bonds are issued by developers in onshore market, which was RMB621.2 bn in 2016. Feedback from HK listed developers is consistent: no signal for loosening. However, some developers have been required to submit supplementary documents, after that, no response again. On the other hand, permission of offshore issuance from NDRC is still needed. NDRC curbs approval of offshore bond issuance very strictly. This move also indicates government intends to cool down land market. High liquidity will boost land price rapidly, then home price surge simultaneously. The land price and home price form an infinitive loop of home price rocket until liquidity dries up.

Moreover, land supply have been enlarged by the end of 2016. According to CRIC data, in Jan. to May 2017, land supplies in 1<sup>st</sup>/2<sup>nd</sup>/3<sup>rd</sup> tier cities increased 31.2%/12.3%/21.8% yoy. However, as credit tightening from 4Q2016, land sold in GFA recorded -1.3% yoy decline in 1<sup>st</sup> tier cities, only 3.2%/13.7% yoy growth in 2<sup>nd</sup>/3<sup>rd</sup> tier cities. Land supply in GFA in Shanghai Beijing and Shenzhen recorded 52.9%/56.8%/65.7% yoy growth, but land sold in GFA in Shanghai and Beijing recorded only 1.9% and 8.4% yoy growth. Shenzhen recorded 97.4% yoy growth, but sold over supply ratio is only 55%, much lower than those of Beijing, Shanghai and Guangzhou, which are over 70%.

Figure 3: Land supply in 1<sup>st</sup> / 2<sup>nd</sup> / 3<sup>rd</sup> tier cities

| Cities          | Cities in Chinese | GFA Sold in Jan. to May. 2016<br>(sq.m) | GFA Sold in Jan. to May. 2017<br>(sq.m) | yoy Growth |
|-----------------|-------------------|---|---|------------|
| 1st tier cities |                   |   |   |            |
| Shanghai        | 上海                | 3,498,081                               | 5,347,308                               | 52.9%      |

## Sales growth momentum halted

### Tightening policies show their efficiency.

In Jan. 2013, more cities introduced HPR, GFA sold growth declined from 17.3% yoy in 2013 to -7.6% yoy in 2014. In 2015, the GFA sold growth rebounded to 6.5% yoy, but much lower than that of 2013. As the HPR loosening in 2016, GFA sold growth rebounded 22.5% yoy in 2016. However, HPR tightening comes again, the growth in Jan. to May 2017 fell to 14.3% yoy, which was up 33.2% in Jan. to May 2016.

Figure 4: Cumulative GFA sold in China

Source: NBS

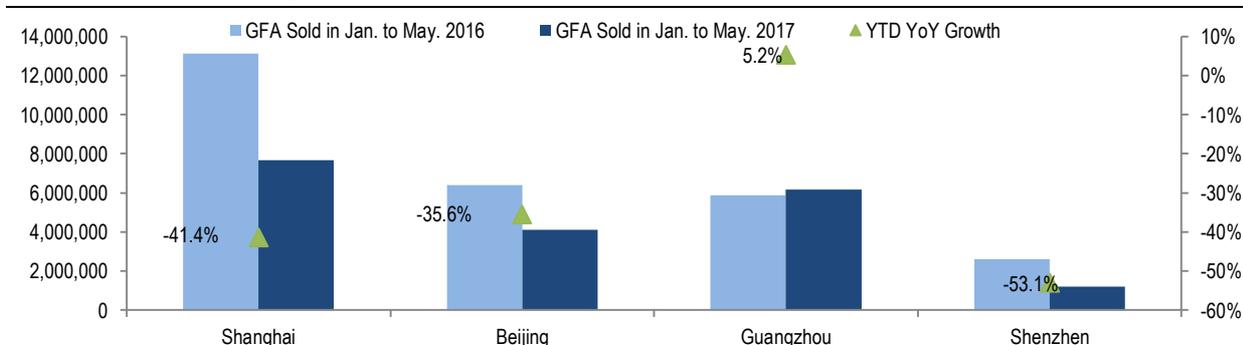

The 15.7% growth seems to be good in tightening situation. However, GFA sold breakdown by cities will show you different views:

In 1<sup>st</sup> tier cities, GFA sold in Shanghai/Beijing/Shenzhen fell 41.4%/35.6%/53.1% yoy. Overall, GFA sold in 1<sup>st</sup> tier cities declined by 31.4%

In 2<sup>nd</sup> tier cities, Only 2 of 13 cities recorded positive yoy growth. GFA sold in 2<sup>nd</sup> tier cities declined by 28.2%

In 3<sup>rd</sup> tier cities, sales growth becomes polarization. Sales growth in Langfang/Beihai/Yueyang jumped to 322.1%/314.2%/161.6% yoy. Sales growth in Shantou/Haikou/Wuxi fell to -85.5%/-70.4%/-69.1%. GFA sold in 3<sup>rd</sup> tier cities was down by 25.8%. **Our guess is the growth of home sales may be in lower tier cities not tracked.**

### Pre-sales price approval is the key in 2H2017

Moreover, pre-sales price approval is the key factor that developers have to worry. If the pre-sales price is approved at a low price, profitability will be much lower than expectation. However, if the developers hold on launching, interest burden will lower profit. It becomes a dilemma for developers. **Most developers are patient to wait till Golden Sept. & Silver Oct (金九银十) in order to launch new supplies at desirable price. The strict tightening intends to cool down the market and lower home price, not clamp down the market.**

## Inventories & Investment

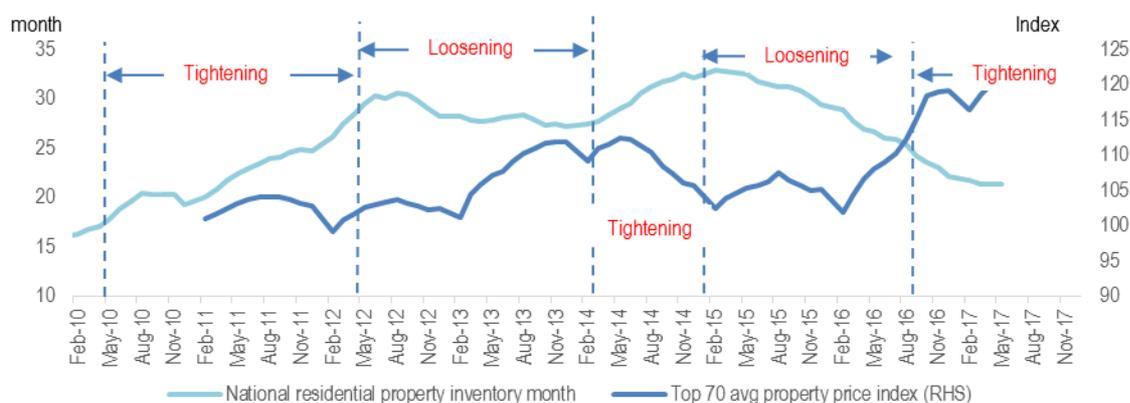

It is unavoidable to discuss these topics in property sector report. We all know property play crucial role in GDP growth. However, how crucial is the property market?

### Last round of loosening succeed in destocking

Due to the strong sales in 2016/17, national inventory months have declined to a very healthy level of only 21.3 months in May 2017, the lowest level since 2011. This gives room and time for the tightening policies.

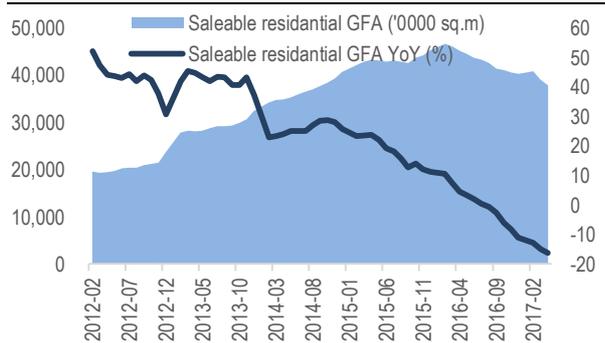

Saleable GFA peaked in Feb. 2016. Then it declined steadily and recorded yoy decline in Nov. 2016. It is the first time recorded yoy decline of saleable GFA since 2004. In 2015, government loosened HPR and lowered down payment ratio, which released demand that have been curbed for 2-3 years. Sales boomed and inventory keep declining. In May 2017, saleable GFA declined by 8.5% yoy, while saleable residential GFA further declined by 17.8% yoy.

**Fierce competition of land auction in 2<sup>nd</sup> tier cities, more capital flows into 3<sup>rd</sup> tier cities recently.**

According to Wind, the land sold in top 100 cities declined in last four years. Over 50%/40% of GFA sold are contribution from 3<sup>rd</sup>/2<sup>nd</sup> tier cities. In terms of value of land sold, 3<sup>rd</sup> tier cities only contributed 23.2% of total value. 61.9% of total value are contributed by 2<sup>nd</sup> tier cities.

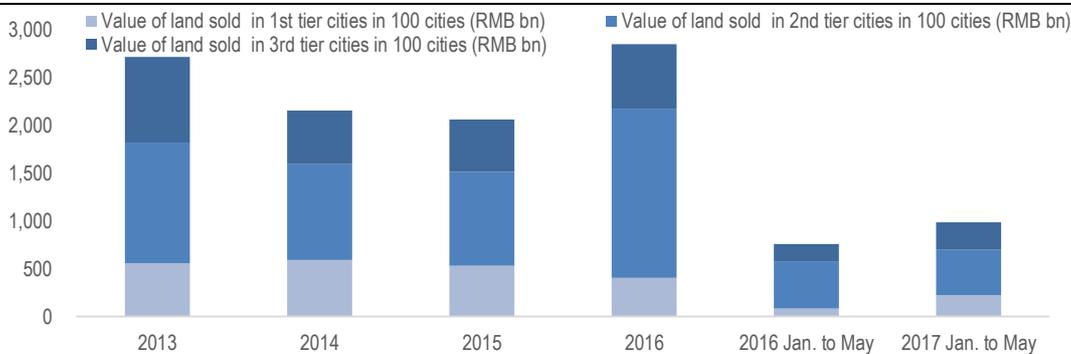

Before 2015, most of developers were chasing land bank in 1<sup>st</sup> tier cities. Land auctions became fiercer. Average premium rate of land sold in 1<sup>st</sup> tier cities is 25.3%. Some developers shifted to 2<sup>nd</sup> tier cities for better margin. The success of these developers attracted more developers entered 2<sup>nd</sup> tier and 3<sup>rd</sup> tier cities, especially satellite cities of 1<sup>st</sup> tier cities, e.g: Huizhou, Dongguan, Suzhou, Jiaxin and Langfang. Premium rate of land sold in 2<sup>nd</sup> tier and 3<sup>rd</sup> tier cities jumped from single digit to over 60%, even over 90%.

**Real estate investment come to steady and healthy growth after unreasonable growth in 2011-2013.**

Newly commencement always lag behind by GFA sold. Gap between newly commence GFA and GFA sold is narrowing in the last four years. Growth of newly commence GFA are lower than that of GFA sold in 2015/2016/first 5 months of 2017. It indicates 1) Developers are more cautious on commencement, in order to avoid liquidity crisis; and 2) policy uncertainty in the near term.

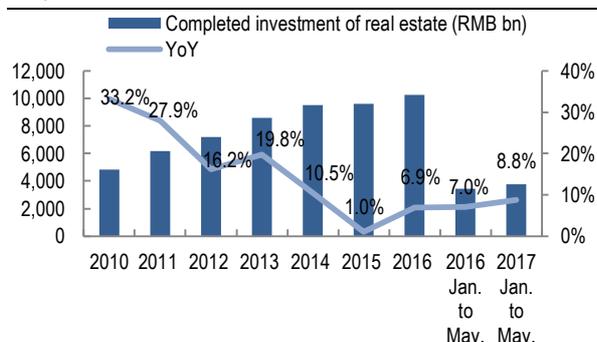

**Figure 14: Newly commence GFA and GFA sold**

Source: NBS

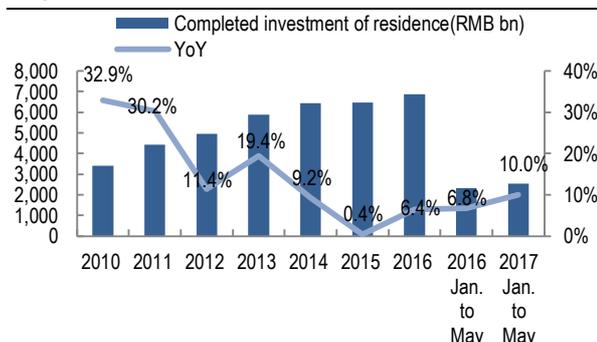

As more cities introduced HPR in early 2013, growth of GFA sold and completed investment of real estate came to a turning point in 2013. Growth of completed investment declined from 2013 to 2015, bottomed out in 2015, due to loosening of HPR. Although saleable GFA is declining, developers are still cautious on newly commencement. HPR loosening released demands in 2015, meanwhile, home price surged again. Growth of home price is higher than government's expectation in 2016, new round of HPR tightening has come 4Q2016. Policy uncertainty and credit tightening affect developers' confidence.

## Consolidators are growing fast

Giants are gaining more market share, which have been priced in share price. However, will share price keep gaining in 2H2017?

### Great financial improvement after a loosening year.

Loosening in 2015 and 2016 further released home demand in 2016. Home sales rebounded and home price surged in 2016. All developers have grasped the window period to improve sales performance. Besides, 18 of 29 developers have reduced their net gearing ratio in FY16. The highest reduction is Jingrui, which declined 107 pts of net gearing ratio. In the giants group, COLI and Country Garden reduced their net gearing ratio by 29.4 pts and 34.6 pts. In mid-size group, Times ppty./Sino-ocean/Future Land/ reduced their net gearing ratio by 46.8/20.5/20.4 pts. There are some exceptions, e.g.: Evergrande up 206 pts with very aggressive land acquisitions; Sunac China up 157.7 pts with land acquisitions; R&F up 48.1 pts; Modern Land up 38.8 pts with land replenishment.

Figure 17: Net gearing ratio comparison

| %                | Net gearing Ratio |        |        |                        |                        |

**Sales performances of listed developers are unexpectedly good.**

Although sales data breakdown by cities shows that the property sales growth slowed down, it is surprising that listed developers' performances are unexpectedly good. 5 companies have achieved over 50% of their target. Longfor even achieved 69% of its target. **Developers mainly in 3<sup>rd</sup> tier cities, Evergrande, Country Garden and COGO, achieved RMB183 bn, RMB224 bn and HKD13 bn in first 5 months of 2017, representing 75.9% yoy, 30.9% yoy and 126.5% yoy. We believe there are some positive factors in 3<sup>rd</sup> cities: 1) less tightening on pre-sales price approval, 2) lower home price with lower risk control for commercial banks, 3) destocking in 3<sup>rd</sup> tier cities and no HPR in most of 3<sup>rd</sup> tier cities.**

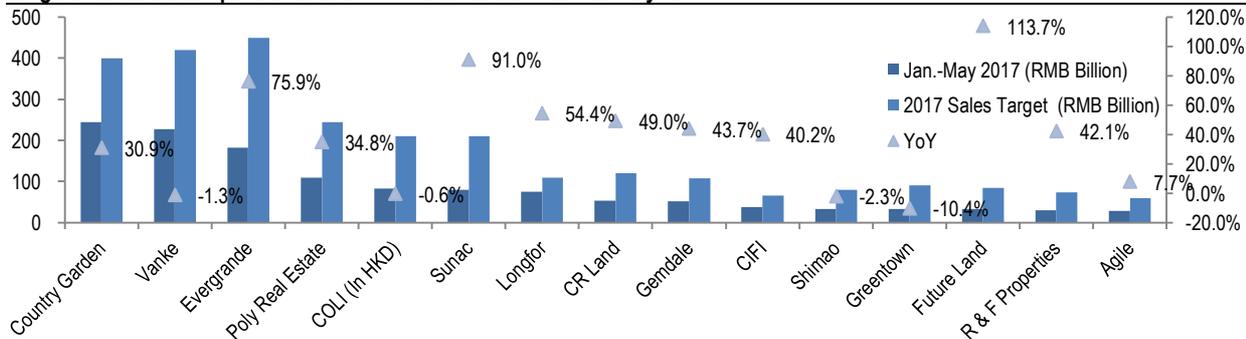

**Figure 19: Sales target achievement in Jan. to May 2017**

Giants, Vanke & COLI, whose core assets locate in 1<sup>st</sup> and 2<sup>nd</sup> tier cities, achieved RMB228 bn and HKD83 bn, down by 1.3% and 0.6% yoy. Sunac/Longfor/CR Land are catching up with COLI, which achieved RMB80 bn /76 bn/53 bn, representing 91%/54%/49% yoy growth.

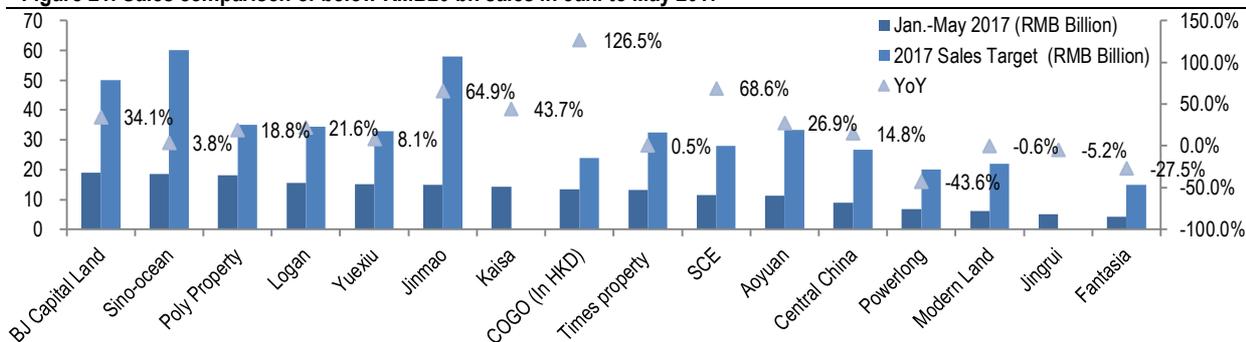

**Figure 20: Sales comparison of over RMB20 bn sales in Jan. to May 2017**

Source: Company data; AMTD Equity Research

In the group of below RMB20 bn sales, all of listed developers recorded moderate yoy growth, from 8% to 35%.

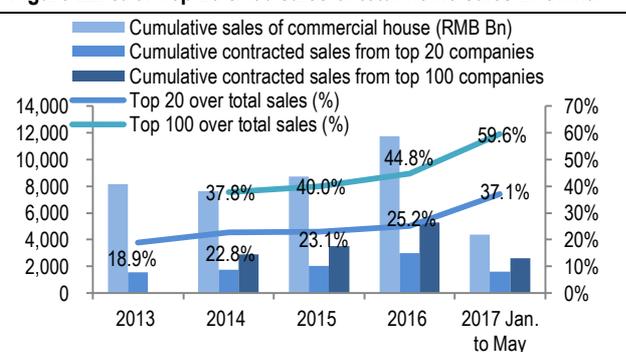

**Figure 21: Sales comparison of below RMB20 bn sales in Jan. to May 2017**

Source: Company data; AMTD Equity Research

Sector leaders performed much better than smaller developers. Market concentration accelerates and sales scale become the key of developers. **The era of oligopoly has come. Top 20 companies accounted for 25.2% of total sales of commercial house in China. Top 100 companies accounted for 44.8% of total sales in China. 21-100 ranking companies only accounted for 19.6% of total sales.** In first 5 months of 2017, top 20 accounted for 59.6% of total sales, top 100 accounted for 37.1% of total sales, 21-100 ranking companies only accounted for 22.5%. Leaders will enjoy lower interest cost, higher pricing power with strong brand premium and more co-operating opportunities. **In current market environment. We believe in currently situation, more saleable resource in 3rd tier cities and satellite cities of 1<sup>st</sup> tier cities should have better sales performance.**

## Who have got too much land bank?

Low land bank year doesn't mean low growth potential; oppositely, it means health turnover rate and better sales performance. However, if land bank year is longer than 5 years that would be a signal that the companies have acquired too many land plot without development abilities. Giants usually have 4.1-5.1 of land bank year, as high turnover. Holding too many land bank will have more interest cost (most companies acquired land by leverage). However, if the land bank year is lower than 2.5 years that would be a hint that the companies face sustainable development issue.

Companies with high land bank year always go with high net gearing ratio, because **inventories have not been converted to profit effectively**. If we assume home price unchanged but growth maintains, more GFA will be sold, how will the land bank year be? Giants will have 3.4-4.3 years. Sunac still has 7.3 years. Expected land bank year of Greentown/R&F/Jinmao/Powerlong/Fantasia are higher than 7 years. We still believe 3-5 year should be comfort room for developers, good for balance sheet and lower interest cost in tightening policy and credit environment.

**Figure 23: Land bank comparison**

| ('000 sq.m.)     | Land bank as of Dec 2016 | Land acquired in 2016 | GFA Sold | Land bank year | Expected growth of sales | Expected GFA sold in 2017 | Land bank year (under expected sales) |
|------------------|--------------------------|-----------------------|----------|----------------|--------------------------|---------------------------|---------------------------------------|

**Be cautious on giants, look for safe margin after consolidators gained more YTD**

We expect the property sector valuation to de-rate in 2H17. We selectively overweigh developers with achievable presales growth, less share price gain YTD, and relatively low valuation. We are cautious on developers with big share price gains YTD, as main consolidators, Evergrande and Country Garden performed very well YTD, up 187% and 106%. Thanks to the rapid growth of contracted sales in 3<sup>rd</sup> tier cities. Sunac also gained 137% YTD. Future Land and COGO have rapid growth of contracted sales in Jan. to May 2017, which have priced in the share price as well. As HPR continues, sales performance is expected to be affected, high yoy growth in first 5 months in 2017 might not happen again in 2H2017. Sales in 1<sup>st</sup> /2<sup>nd</sup> cities are expected to slow down, sales in 3<sup>rd</sup> tier cities and satellite cities of 1<sup>st</sup> tier cities expected to keep robust in 2H2017. **However, positive factors of 3<sup>rd</sup> tier cities have been priced in share price of Evergrande/ Country Garden/ COGO.**

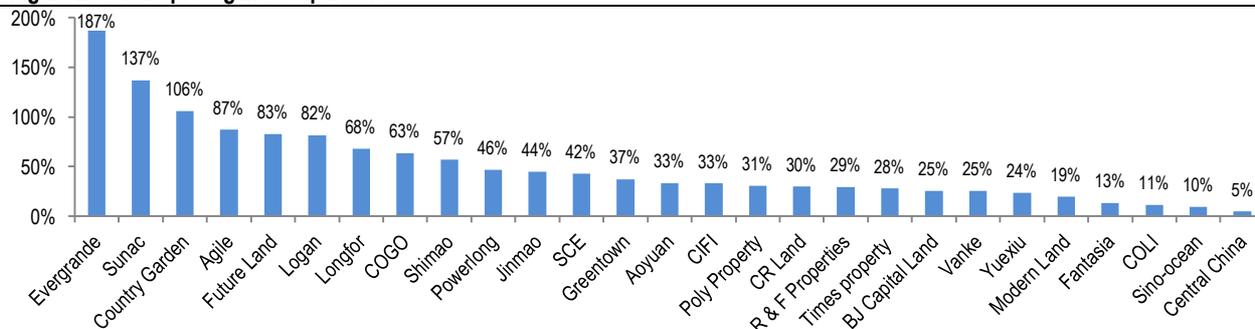

**Or we should look at some names with low valuation, lower gain YTD, high growth potential, high ROE and moderate dividend yield.** Currently, new round of HPR has started, we haven't seen HPR influence on valuation. Moreover, if home sales slows down, we should choose some defensive names in foreseeable downtrend of valuation. **The current P/E of property sector is about 8.3x, approaching their highs in 2015 and in 2012. We look back to 6 year ago, the hardest time in 2011, the market cap weighted P/E of property sector was only 3.9x. Giants and 3<sup>rd</sup> tier cities players with 8x P/E and over 50% gain YTD should be avoided. On the other hand, names with low P/E & P/B, 15% ROE and high dividend yield should be have higher safety margin and attractive for long-only funds.**

## GENERAL DISCLOSURES

---

The research report is prepared by AMTD Asset Management Limited ("AMTD") and is distributed to its selected clients.

This research report provides general information only and is not to be construed as an offer to sell or a solicitation of an offer to buy any security in any jurisdiction where such offer or solicitation would be illegal. It does not (i) constitute a personal advice or recommendation, including but not limited to accounting, legal or tax advice, or investment recommendations; or (ii) take into account any specific clients' particular needs, investment objectives and financial situation. AMTD does not act as an adviser and it accepts no fiduciary responsibility or liability for any financial or other consequences. This research report should not be taken in substitution for judgment to be exercised by clients. Clients should consider if any information, advice or recommendation in this research report is suitable for their particular circumstances and seek legal or professional advice, if appropriate.

This research report is based on information from sources that we considered reliable. We do not warrant its completeness or accuracy except with respect to any disclosures relative to AMTD and/or its affiliates. The value or price of investments referred to in this research report and the return from them may fluctuate. Past performance is not reliable indicator to future performance. Future returns are not guaranteed and a loss of original capital may occur.

The facts, estimates, opinions, forecasts and any other information contained in the research report are as of the date hereof and are subject to change without prior notification. AMTD, its group companies, or any of its or their directors or employees ("AMTD Group") do not represent or warrant, expressly or impliedly, that the information contained in the research report is correct, accurate or complete and it should not be relied upon. AMTD Group will accept no responsibilities or liabilities whatsoever for any use of or reliance upon the research report and its contents.

This research report may contain information from third parties, such as credit ratings from credit ratings agencies. The reproduction and redistribution of the third party content in any form by any mean is forbidden except with prior written consent from the relevant third party. Third party content providers do not guarantee the timeliness, completeness, accuracy or availability of any information. They are not responsible for any errors or omissions, regardless of the cause, or for the results obtained from the use of such content. Third party content providers give no express or implied warranties, including, but not limited to, any warranties of merchantability of fitness for a particular purpose or use. Third party content providers shall not be liable for any direct, indirect, incidental, exemplary, compensatory, punitive, special or consequential damages, costs, expenses, legal fees, or losses (including lost income or profits and opportunity costs) in connection with any use of their content. Credit ratings are statements of opinions and are not statements of fact or recommendations to purchase, hold or sell securities. They do not address the suitability of securities for investment purposes, and should not be relied on as investment advice.

To the extent allowed by relevant and applicable law and/or regulation: (i) AMTD, and/or its directors and employees may deal as principal or agent, or buy or sell, or have long or short positions in, the securities or other instruments based thereon, of issuers or securities mentioned herein; (ii) AMTD may take part or make investment in financing transactions with, or provide other services to or solicit business from issuer(s) of the securities mentioned in the research report; (iii) AMTD may make a market in the securities in respect of the issuer mentioned in the research report; (iv) AMTD may have served as manager or co-manager of a public offering of securities for, or currently may make a primary market in issues of, any or all of the entities mentioned in this research report or may be providing, or have provided within the previous 12 months, other investment banking services, or investment services in relation to the investment concerned or a related investment.

AMTD controls information flow and manages conflicts of interest through its compliance policies and procedures (such as, Chinese Wall maintenance and staff dealing monitoring).

**The research report is strictly confidential to the recipient. No part of this research report may be reproduced or redistributed in any form by any mean to any other person without the prior written consent of AMTD Asset Management Limited.**
